

Deliverable 2

How to install Proxmox VE

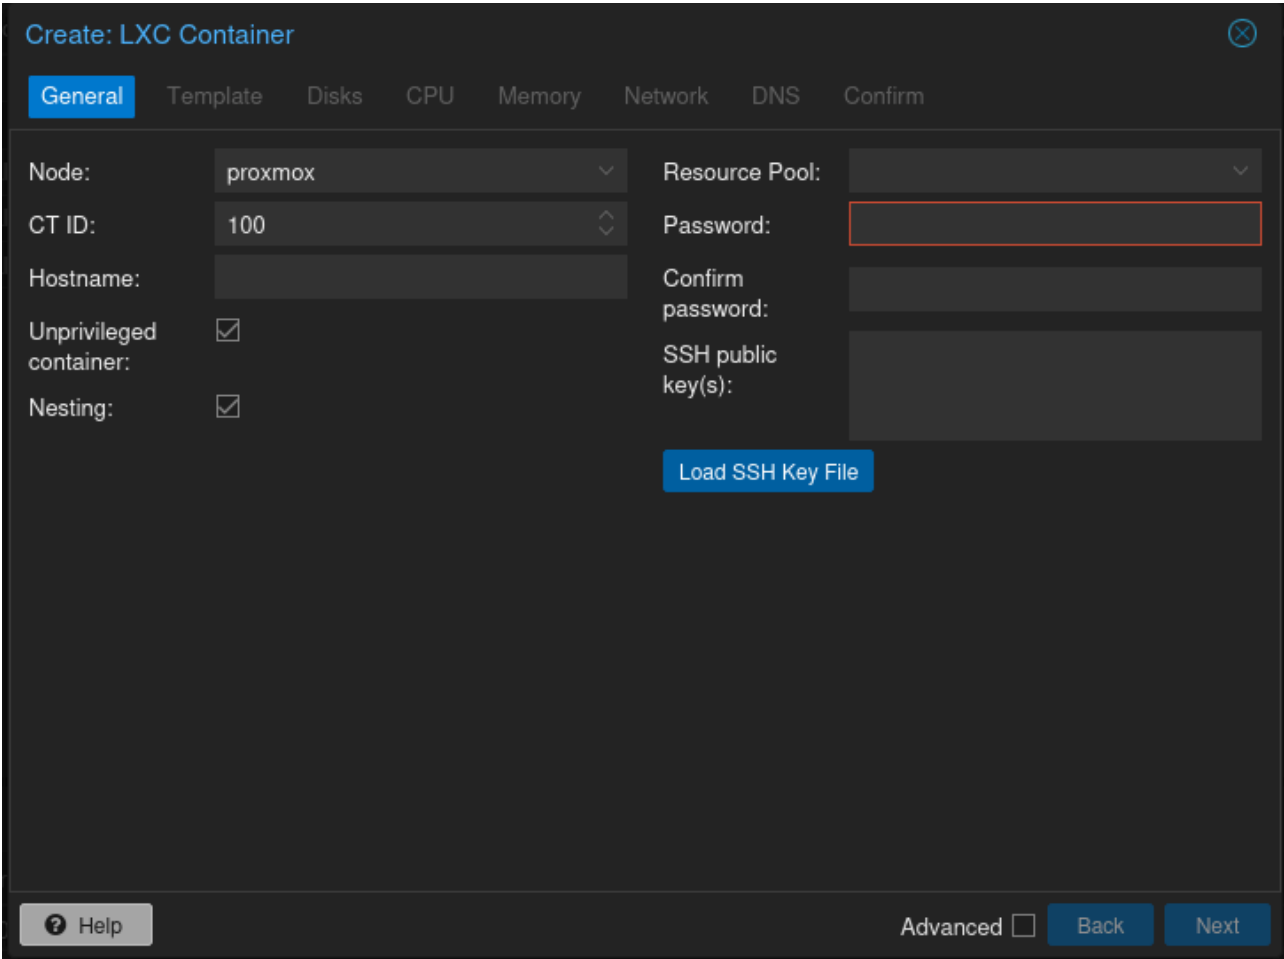

1. Download the Proxmox VE ISO from the official website.
2. Flash the ISO to a USB drive using Rufus.
3. Boot your computer from the USB drive.
4. Select **Install Proxmox VE**.
5. Accept the license agreement.
6. Choose the storage drive for installation.
7. Set the administrator password and network settings.
8. Complete the installation and reboot.
9. Access the web interface:

https://YOUR-SERVER-IP:8006 (proxmox default port)

How to create a Debian container

1. In Proxmox, go to **Node** → **CT Templates**.
2. Download a **Debian** template (example: Debian 12).
3. Click **Create CT**.
4. Set:
 - **Hostname**
 - **Password**
5. Select the Debian template you downloaded.
6. Choose disk size, CPU cores, and RAM.
7. Set the network to **DHCP** (or static).
8. Finish and start the container.

9. 

How to install MariaDB

Run the following commands inside the Debian container:

```
apt update
apt install mariadb-server -y
```
