ies currently installed.)
Purging configuration files for bastet (0.43.2-
2) ...
abueno@Cis106:~$

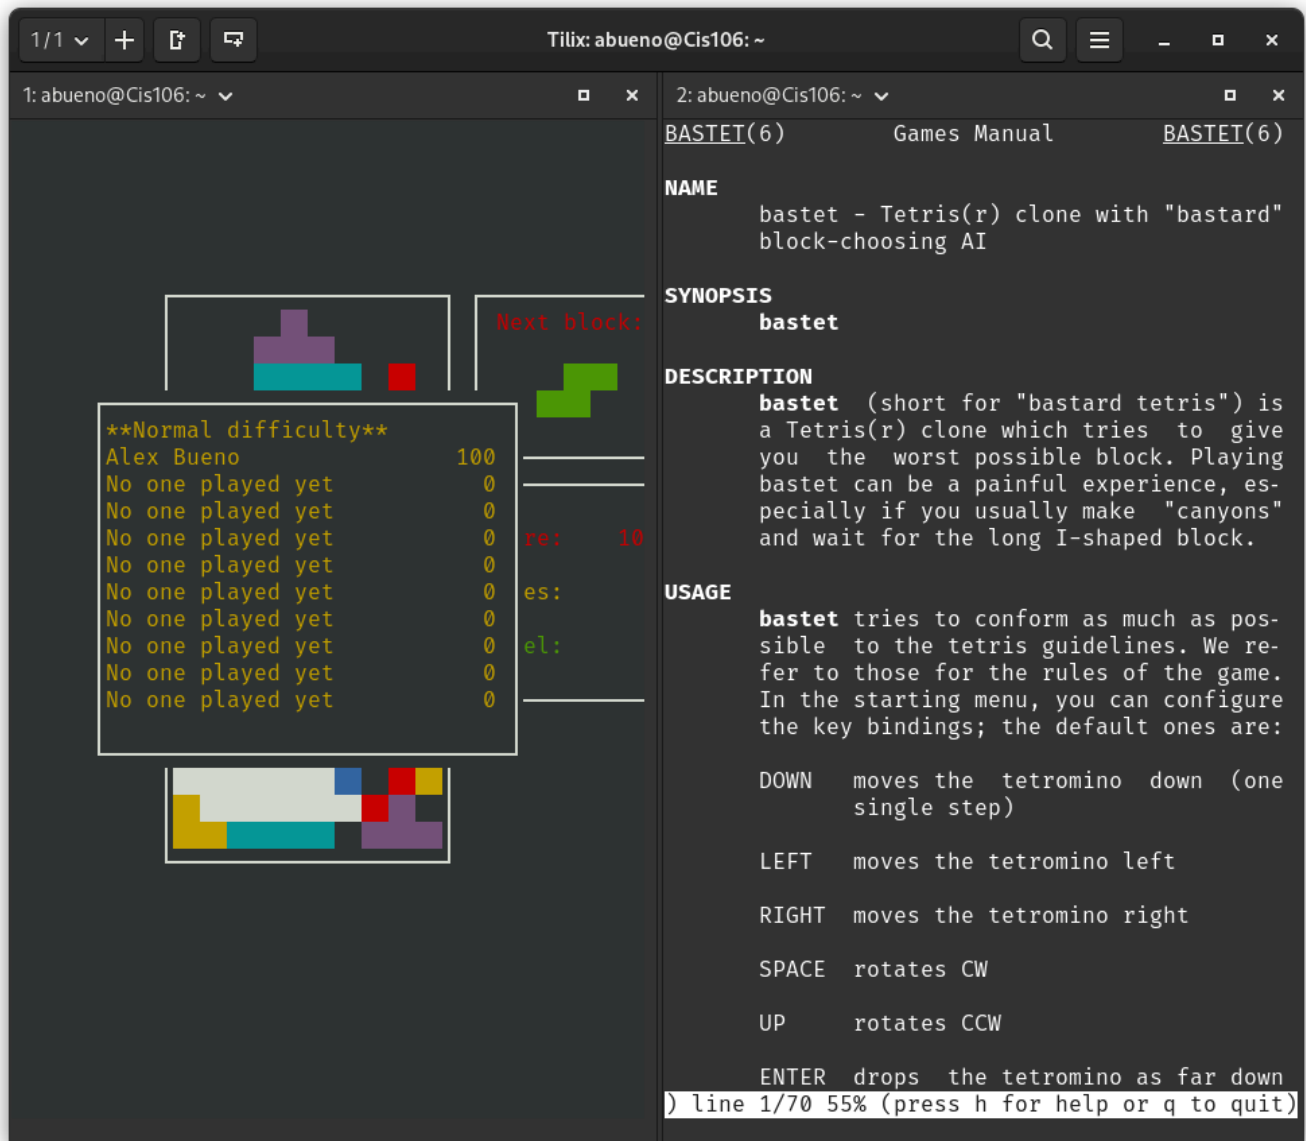

full-upgrade (apt-get(8))
  full-upgrade performs the function
  of upgrade but will remove
  currently installed packages if
  this is needed to upgrade the
  system as a whole.

  When a package is supplied as an
  argument, the package will be
  installed prior to the upgrade
  action.

install, reinstall, remove, purge (apt-
get(8))
  Performs the requested action on
  one or more packages specified via
  regex(7), glob(7) or exact match.
  The requested action can be
  overridden for specific packages by
  appending a plus (+) to the package
  name to install this package or a
  minus (-) to remove it.

  A specific version of a package can
  be selected for installation by
  following the package name with an
  equals (=) and the version of the
  package to select. Alternatively
  the version from a specific release
  can be selected by following the
  package name with a forward slash
  (/) and codename (trixie, forkyl,
  sid ...) or suite name (stable,
  testing, unstable). This will also
  select versions from this release
  apt(8) line 64 (press h for help or q to quit)
